

Virtual Reality Sickness Questionnaire

Participant ID:

Date:

The following questionnaire was developed by H.K. Kim et al.^[1], and it aims to assess any symptoms of discomfort or motion sickness experienced during or after exposure to the virtual reality environment. Your responses will help evaluate the usability and physiological impact of the VR experience. Please answer each item based on how you felt during the session, using the provided rating scale: 0 = not at all; 1 = slight; 2 = moderate; 3 = severe.

VRSQ symptom	Score
1. General discomfort	
2. Fatigue	
3. Eyestrain	
4. Difficulty focusing	
5. Headache	
6. Fullness of head	
7. Blurred vision	
8. Dizzy (eyes closed)	
9. Vertigo	

Total score for the Oculomotor components (1-4) =

Total score for the Disorientation components (5-9) =

$$\text{Total score} = \frac{\frac{\text{Oculomotor score}}{12} + \frac{\text{Disorientation score}}{15}}{2} \times 100 =$$
